		Accelerate development by using a standard set of entities for the most common scenarios.		Feature

A. Mastered
B. Not Mastered

Answer: A

Explanation:
Box 1: business rules
You can create business rules and recommendations to apply logic and validations without writing code or creating plug-ins. Business rules provide a simple interface to implement and maintain fast-changing and commonly used rules.
Box 2: business process flows
Flows Power Automate includes several types of processes, each designed for a different purpose:
≫ Automated flows. Create a flow that performs one or more tasks automatically after it's triggered by an event.
≫ Button flows. Perform repetitive tasks simply by tapping a button on your mobile device.
≫ Scheduled flows. Create a flow that performs one or more tasks on a schedule such as once a day, on a specific date, or after a certain time.
≫ Business process flows. Ensure that people enter data consistently and follow the same steps every time they work in an app by creating a business process flow.
≫ Workflows and actions. Dynamics 365 customizers may be familiar with the classic Common Data Service processes, which are workflows and actions.
Box 3: Common Data Model
Model-driven app design is a component-focused approach to app development. Model-driven app design doesn't require code and the apps you make can be simple or very complex. Unlike canvas app development where the designer has complete control over app layout, with model-driven apps much of the layout is determined for you and largely designated by the components you add to the app.

You can export data from a visualization in a Power BI report.	○	○
You can show the data behind a visual report on your screen without exporting the data.	○	○
You must export data to view supporting data for a KPI.	○	○

A. Mastered
B. Not Mastered

Answer: A

Explanation:
Box 1: Yes

If you'd like to see the data that Power BI uses to create a visualization, you can display that data in Power BI. You can also export that data to Excel as an .xlsx or .csv file. The option to export the data requires a Pro or Premium license and edit permissions to the dataset and report.
Note: Export data from a Power BI dashboard
➢ Choose the Export data icon.
➢ Power BI exports the data to a .csv file. If you've filtered the visualization, then the app will filter the downloaded data.
➢ Your browser will prompt you to save the file. Once saved, open the .csv file in Excel. Box 2: No
Underlying data: Select this option if you want to see the data in the visual and additional data from the model (see chart below for details). If your visualization has an aggregate, selecting Underlying data removes the aggregate. When you select Export, Power BI exports the data to an .xlsx file and your browser prompts you to save the file. Once saved, open the file in Excel.
Box 3: Yes
A KPI dataset needs to contain goal values for a KPI. If your dataset doesn't contain goal values, you can create them by adding an Excel sheet with goals to your data model or PBIX file.
Note: A Key Performance Indicator (KPI) is a visual cue that communicates the amount of progress made toward a measurable goal.
