Answer: B

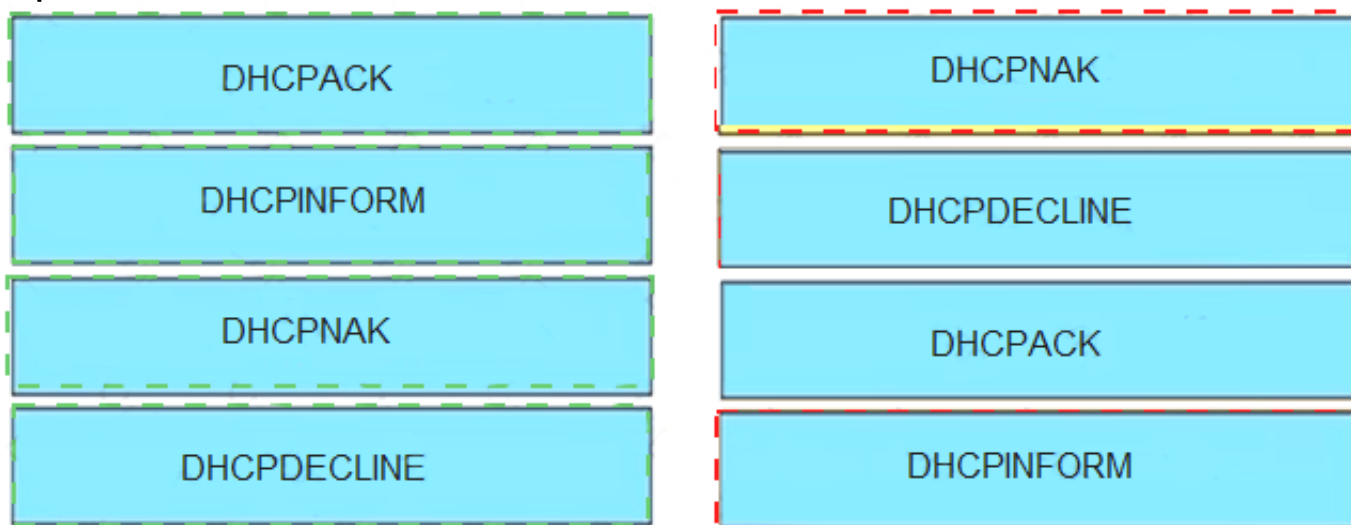

### NEW QUESTION 5

Drag and drop the DHCP messages from the left onto the correct uses on the right.

DHCPACK	server-to-client communication, refusing the request for configuration parameters
DHCPINFORM	client-to-server communication, indicating that the network address is already in use
DHCPNAK	server-to-client communication with configuration parameters, including committed network address
DHCPDECLINE	client-to-server communication, asking for only local configuration parameters that the client has already externally configured as an address

A. Mastered

**Explanation:**

Refer to the exhibit.

```
R1#show running-config | section dhcp
ip dhcp excluded-address 192.168.1.1 192.168.1.49
ip dhcp pool DHCP
  network 192.168.1.0 255.255.255.0

**NEW QUESTION:**  
Refer to the exhibit.

Network diagram showing four routers (R1, R2, R3, R4) and four PCs (PC1, PC2, PC3, PC4) connected in a mesh topology. R1 is connected to PC1 (10.1.1.10/24) via G0/0. R2 is connected to R1 via G0/0 (12.12.12.0/24) and to PC2 (10.2.2.20/24) via G0/0. R3 is connected to R2 via G0/1 (23.23.23.0/24) and to PC3 (10.3.3.30/24) via G0/0. R4 is connected to R3 via G0/2 (34.34.34.0/24) and to PC4 (10.4.4.40/24) via G0/0. R2 and R3 are connected via G0/1 (24.24.24.0/24). R2 and R3 are part of OSPF 100. R4 is part of EIGRP 100. R1 is part of RIP. Red arrows indicate redistribution between R2 and R3.

An engineer is trying to generate a summary route in OSPF for network 10.0.0.0/8, but the summary route does not show up in the routing table. Why is the summary route missing?

- A. The summary-address command is used only for summarizing prefixes between areas.  
B. The summary route is visible only in the OSPF database, not in the routing table.  
C. There is no route for a subnet inside 10.0.0.0/8, so the summary route is not generated.

D. The summary route is not visible on this router, but it is visible on other OSPF routers in the same area.

**Answer:** A

#### NEW QUESTION 23

An engineer configures a static route on a router, but when the engineer checks the route to the destination, a different next hop is chosen. What is the reason for this?

- A. Dynamic routing protocols always have priority over static routes.
- B. The metric of the OSPF route is lower than the metric of the static route.
- C. The configured AD for the static route is higher than the AD of OSPF.
- D. The syntax of the static route is not valid, so the route is not considered.

**Answer:** C

#### NEW QUESTION 24

Refer to the exhibit.

```
TAC+: TCP/IP open to 171.68.118.101/49 failed --
Destination unreachable; gateway or host down

AAA/AUTHEN (2546660185): status = FAIL
As1 CHAP: Unable to validate Response. Username chapuser: Authentication failure
```

Why is user authentication being rejected?

- A. The TACACS+ server expects "user", but the NT client sends "domain/user".
- B. The TACACS+ server refuses the user because the user is set up for CHAP.
- C. The TACACS+ server is down, and the user is in the local database.
- D. The TACACS+ server is down, and the user is not in the local database.
