## **Exam Questions DP-300**

Administering Relational Databases on Microsoft Azure (beta)

NEW QUESTION 1

You have a Microsoft SQL Server 2019 instance in an on-premises datacenter. The instance contains a 4-TB database named DB1. You plan to migrate DB1 to an Azure SQL Database managed instance.  
What should you use to minimize downtime and data loss during the migration?

- A. distributed availability groups
- B. database mirroring
- C. log shipping
- D. Database Migration Assistant

Answer: A

NEW QUESTION 2

HOTSPOT

You have an on-premises Microsoft SQL Server 2016 server named Server1 that contains a database named DB1.  
You need to perform an online migration of DB1 to an Azure SQL Database managed instance by using Azure Database Migration Service. How should you configure the backup of DB1? To answer, select the appropriate options in the answer area.  
NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Backup type: 

Full and log backups only

Full backup only

Log backup only

Backup option: 

WITH CHECKSUM

WITH NOINIT

WITH UNLOAD

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

Backup type: 

Full and log backups only

Full backup only

Log backup only

Backup option: 

WITH CHECKSUM

WITH NOINIT

WITH UNLOAD

NEW QUESTION 3

You are building a database backup solution for a SQL Server database hosted on an Azure virtual machine.  
In the event of an Azure regional outage, you need to be able to restore the database backups. The solution must minimize costs. Which type of storage accounts should you use for the backups?

- A. locally-redundant storage (LRS)
- B. read-access geo-redundant storage (RA-GRS)
- C. zone-redundant storage (ZRS)
- D. geo-redundant storage

Answer: B

NEW QUESTION 4

You have SQL Server on Azure virtual machines in an availability group.  
You have a database named DB1 that is NOT in the availability group. You create a full database backup of DB1.  
You need to add DB1 to the availability group.  
Which restore option should you use on the secondary replica?

- A. Restore with Recovery
- B. Restore with Norecovery
- C. Restore with Standby

Answer: B

#### NEW QUESTION 5

You are planning disaster recovery for the failover group of an Azure SQL Database managed instance.

Your company's SLA requires that the database in the failover group become available as quickly as possible if a major outage occurs. You set the Read/Write failover policy to Automatic.

What are two results of the configuration? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. In the event of a datacenter or Azure regional outage, the databases will fail over automatically.
- B. In the event of an outage, the databases in the primary instance will fail over immediately.
- C. In the event of an outage, you can selectively fail over individual databases.
- D. In the event of an outage, you can set a different grace period to fail over each database.
- E. In the event of an outage, the minimum delay for the databases to fail over in the primary instance will be one hour.

**Answer:** AE

#### NEW QUESTION 10
