DRAG DROP

What is the order of operations for creating the GL Account Structure and Chart of Accounts for an Organization?

Unordered Options

- 0 Define GL Structure in Database Configuration.
- 0 Create GL Component Codes for Organization.
- 0 Create GL Account Code combinations for Organization
- 0 Apply Database Configuration Changes.

Ordered Options

- 0
 - 0
 - 0
 - 0
- ➤

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

The 01st step is to define the GL Structure in the Database Configuration application, which allows you to specify the segments, lengths, and separators of the GL account code.

The 2nd step is to apply the database configuratin changes, which will create the necessary tables and columns in the database to store the GL account information.

The 3rd step is to create the GL Component Code for the Organization, which allows u to define the value and description for each segment of the GL account code.

The fourth step is to create the GL Account Code combinations for the Organization, which allows you to generate and validate the complete GL account codes based on the component cods.

NEW QUESTION 3

In which three applications can Asset Depreciation be configured?

- A. Chart of Accounts
- B. Tools
- C. Asset Templates
- D. Locations
- E. Assets
- F. Item Master

Answer: CEF

Explanation:

Asset Depreciation can be configured in the following three applications:

? C. Asset Templates: You can define depreciation settings within asset templates to standardize how assets of the same type depreciate. This ensures consistency and saves time when creating new assets. (Reference: IBM Maximo Manage v8.0 documentation - Asset Templates)

? E. Assets: Depreciation can be configured directly on individual asset records. This allows for flexibility if an asset has unique depreciation circumstances that differ from the template. (Reference: IBM Maximo Manage v8.0 documentation - Assets application)

? F. Item Master: When creating an item record that will be used as an asset, you can specify depreciation information. This is useful for items that are commonly capitalized and tracked as assets. (Reference: IBM Maximo Manage v8.0 documentation - Item Master application)

NEW QUESTION 4

Which Maximo application can be used to generate replacement plans for assets?

- A. Maximo Predict

- B. Maximo Health
- C. Maximo Health, Safety and Environmental (HSE)
- D. Maximo Manage

Answer: B

Explanation:

IBM Maximo Health, part of the Maximo Application Suite, is specifically designed to enable comprehensive asset performance monitoring, including the capability to generate replacement plans for assets. With Maximo Health, users can assess an asset's remaining useful life, criticality, and health scores to make data-driven decisions about whether to repair, refurbish, or replace an asset.

Key features in Maximo Health that facilitate replacement planning include:

? Expected Life and Replacement Planning: Users can evaluate assets approaching the end of their lifecycle. For assets flagged for replacement or nearing their projected end of life, Maximo Health offers views like the "Expected Life" or "Plan Costs" to initiate a replacement plan. This process allows for strategic planning of asset replacements to ensure operational reliability and cost-effectiveness

IBM GitHub

Maximo Health integrates data from asset condition monitoring, usage history, and criticality analysis, allowing for a proactive approach to asset management and enabling organizations to optimize maintenance budgets by planning replacements only when necessary. Thus, option B (Maximo Health) is the correct answer.

NEW QUESTION 5

What is the appropriate order of phases in order to create a workflow process?

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

The appropriate order of phases in order to create a workflow process in IBM Maximo Manage is:

? Create the process: This involves designing the workflow process using the

Workflow Designer application, including creating the activities, transitions, and conditions that make up the process.

? Validate the process: This involves ensuring that the process has been designed

correctly and meets the desired requirements. This can be done by testing the process and making any necessary adjustments.

? Enable the process: This involves making the process available for use in the system by enabling it in the Workflow Designer application.

? Activate the process: This involves activating the process in the Workflow Administration application so that it is ready for use by the system.

NEW QUESTION 49

In which two places can Service Request Categories be created for use in the Service Request Work Center?

- A. Classifications Application
- B. Administration Work Center
- C. Business Analysis Work Cen
- D. Service Desk Application
- E. Service Catalog Application

Answer: AB

Explanation:

<https://www.ibm.com/support/pages/creating-service-request-categories-and-category-options-service-request-work-center#:~:text=In%20the%20Service%20Request%20Work%20Center%2C%20an%20administrator,Object%20parameter%20and%20Asset%20parameter%20set%20to%20SR.>

In IBM Maximo Manage v8.0, Service Request Categories for the Service Request Work Center can be created in the Administration Work Center and through the Classifications Application:

? Administration Work Center: The Service Request Configuration section within the

Administration Work Center enables administrators to set up and customize service request categories specifically for use in the Service Request Work Center.

This involves defining properties, categories, and issues users select when creating service requests

? Classifications Application: Categories are also managed by setting up

classifications associated with service requests in the Classifications application. When a classification is created with associations to the "Asset" and "SR"

(Service Request) objects, it becomes available as a category option in the Service Request tool. This approach allows issues to be assigned to specific categories using ticket templates tied to classifications

These configurations provide a structured way to set up service categories that enhance service request management by ensuring users select relevant, predefined options during request creation.

NEW QUESTION 51

In the Automation Scripts application, which launch point can be triggered?

- A. Formula
- B. Escalation
- C. Integration
- D. Cron Task

Answer: C

Explanation:

In the IBM Maximo Automation Scripts application, several types of launch points can be configured to trigger scripts, including Integration launch points. The supported launch points in Maximo are:

? Object Launch Point: Triggers on events related to specific objects (MBOs), such as creation, modification, or deletion

? Attribute Launch Point: Triggers when specific attributes within an MBO are accessed or modified

? Action Launch Point: Executes custom actions, often triggered by workflows or escalations, allowing for automation without custom Java code

? Condition Launch Point: Activates when a defined condition is met, commonly used for security or workflow condition logic

? Integration Launch Point: Designed specifically to interact with Maximo Integration Framework (MIF) components, including publish channels, enterprise services, and invocation channels. This enables automation scripts to respond to data exchanges between Maximo and external systems, making it a powerful tool for integration-related automations

The Integration launch point is thus the correct answer as it allows scripts to be triggered by data flow events through MIF.

NEW QUESTION 54

When creating a labor record, what must be associated with it?

- A. User Record
- B. Person Record
- C. Crew
- D. Supervisor

Answer: B

Explanation:

When you create a labor record in IBM Maximo Manage v8.0, you enable a person to report time against a work request1. Before you create a labor record, you must create a corresponding person record1. A person record is defined at the System level and when a person works across multiple organizations, they need multiple Labor records linked to the same Person record2.
